

CHARACTERISTICS:

- ❑ Increased privacy provided by minimal horizontal gaps
- ❑ Seamless technology achieved through the use of hollow profiles
- ❑ Stable profile connections with screws hidden under the caps
- ❑ Modular filling system
- ❑ Rigid structure
- ❑ High, double-sided aesthetic finish
- ❑ Powder-coated product ensuring excellent weather resistance
- ❑ Colouring of the filling considering sublimation

TRAVERTINE AL 200 is known for its high-quality and precise craftsmanship. This model is modern and minimalist. Tailored to the building's style, the exceptional aesthetics of aluminium fences can give a cohesive character to the entire property. Every implementation is approached individually, without relying on dimensional templates. As non-standard solutions, we combine horizontal profiles with each other. This results in a completely opaque fence. TRAVERTINE AL 200 is also an excellent choice for those seeking interesting colour solutions, for example by applying sublimation only to selected profiles.

INSPIRATIONS

TRAVERTINE AL 200

MODERN ALUMINIUM FENCES

EXECUTION:

- filling: horizontal profiles h= 200
- space between horizontal profiles: 20
- ending of vertical profiles: flat aluminium caps

STRUCTURE - FILLING - FINISH

SYSTEM FILLING PROFILES

Made of aluminium hollow profiles, the structure features a uniform, double-sided finish. The fillings are positioned horizontally, providing an excellent match for contemporary finishing elements of house façades, as well as traditional ones. This allows you to create any layout of fillings using system profiles. The fence elements are light, easy to install and maintain, and resistant to weather conditions.

MINIMALIST FINISHING

Connections of hollow profiles are performed using seamless technology. We do not use welds or other visible fasteners. For finishing, we use aesthetic, flat aluminium caps, painted in the selected fence colour. All elements of our fences are connected with a special assembly system.

WOOD-LIKE FILLING

POWDER-COATED WOOD-LIKE FENCING allows for colour matching to existing wooden elements on the property. Such a fence will certainly completely change the visual impression of the entire fenced area, which will make it look exceptionally prestigious.

SUBLIMATION COLOURS

	BLACK CHERRY
	SILVER OAK
	GOLDEN OAK
	PINE

SUBLIMATION FINISHING is a perfect imitation of wood. Aluminium is a much less demanding material in terms of maintenance. Fences secured with this method do not require impregnation or repainting, unlike fences made of wood. That is why this finish has become a popular solution in this industry. The modular structure of the systems allows you to mix profile colours within one segment, wicket, gates or other aluminium structure. We focus primarily on simple forms and minimalism.
